ADHD as a Model of Brain-Behavior Relationships

Leonard F. Koziol, Deborah Ely Budding, and Dana Chidekel

Series Title: Springer Briefs in Neuroscience

Subseries: The Vertically Organized Brain in Theory and Practice

It's been a basic neurological given: the brain does our thinking, and has evolved to do the thinking, as controlled by the neocortex. In this schema, all dysfunction can be traced to problems in the brain’s lateral interactions. But in scientific reality, is this really true? Challenging this traditional cortico-centric view is a body of research emphasizing the role of the structures that control movement-the brain's vertical organization-in behavioral symptoms.

Using a well-known, widely studied disorder as a test case, *ADHD as a Model of Brain-Behavior Relationships* offers an innovative framework for integrating neuroscience and behavioral research to refine diagnostic process and advance the understanding of disorders. Identifying a profound disconnect between current neuropsychological testing and the way the brain actually functions, this revision of the paradigm critiques the DSM and ICD in terms of the connectedness of brain structures regarding cognition and behavior. The authors argue for a large-scale brain network approach to pathology instead of the localizing that is so common historically, and for an alternate set of diagnostic criteria proposed by the NIMH. Included in the coverage:

- The diagnosis of ADHD: history and context.
- ADHD and neuropsychological nomenclature
- Research Domain Criteria: a dimensional approach to evaluating disorder
- The development of motor skills, executive function, and a relation to ADHD
- The role of the cerebellum in cognition, emotion, motivation, and dysfunction
- How large-scale brain networks interact

Heralding a more accurate future of assessment, diagnosis, and treatment of neurodevelopmental disorders, *ADHD as a Model of Brain-Behavior Relationships* represents a major step forward for neuropsychologists, child psychologists, and psychiatrists, or any related profession interested in a neuroscientific understanding of brain function.

From reader reviews:

Angela Heller:

Why don't make it to become your habit? Right now, try to prepare your time to do the important work, like looking for your favorite book and reading a reserve. Beside you can solve your condition; you can add your knowledge by the guide entitled ADHD as a Model of Brain-Behavior Relationships (SpringerBriefs in Neuroscience). Try to stumble through book ADHD as a Model of Brain-Behavior Relationships (SpringerBriefs in Neuroscience) as your friend. It means that it can for being your friend when you feel alone and beside regarding course make you smarter than in the past. Yeah, it is very fortuned for you personally. The book makes you more confidence because you can know everything by the book. So , let us make new experience in addition to knowledge with this book.

Linda Doyle:

What do you concentrate on book? It is just for students because they're still students or it for all people in the world, the particular best subject for that? Simply you can be answered for that concern above. Every person has distinct personality and hobby per other. Don't to be pushed someone or something that they don't would like do that. You must know how great and important the book ADHD as a Model of Brain-Behavior Relationships (SpringerBriefs in Neuroscience). All type of book would you see on many options. You can look for the internet options or other social media.

Beth French:

Spent a free a chance to be fun activity to complete! A lot of people spent their free time with their family, or their very own friends. Usually they performing activity like watching television, gonna beach, or picnic from the park. They actually doing same thing every week. Do you feel it? Do you wish to something different to fill your free time/ holiday? Could be reading a book can be option to fill your no cost time/ holiday. The first thing that you ask may be what kinds of e-book that you should read. If you want to consider look for book, may be the publication untitled ADHD as a Model of Brain-Behavior Relationships (SpringerBriefs in Neuroscience) can be very good book to read. May be it can be best activity to you.

Norma Baumgarten:

ADHD as a Model of Brain-Behavior Relationships (SpringerBriefs in Neuroscience) can be one of your beginning books that are good idea. We recommend that straight away because this publication has good vocabulary that will increase your knowledge in vocab, easy to understand, bit entertaining however delivering the information. The copy writer giving his/her effort that will put every word into joy arrangement in writing ADHD as a Model of Brain-Behavior Relationships (SpringerBriefs in Neuroscience) yet doesn't forget the main point, giving the reader the hottest and based confirm resource data that maybe you can be among it. This great information can drawn you into brand-new stage of crucial pondering.
